Professional Summary

Data Science and Machine Learning Engineer with hands-on experience in Python, SQL, Machine Learning, Deep Learning, NLP, and Data Visualization. Built end-to-end ML applications using Flask/FastAPI and developed predictive models using Scikit-learn, TensorFlow, and LSTM. Passionate about solving real-world business problems through data-driven decision making.

Education

Kolhapur Institute of Technology

Bachelor of Technology in Computer Science(Data Science)

Dec. 2022 – Jun 2026

Kolhapur, Maharashtra

New Model JR. College, Kolhapur

Higher Secondary Certificate

2020 – 2022

Kolhapur, Maharashtra

GPA: 7.79/10

Experience

Vinayak IT Solutions

Data Science Intern

March 2026 – July 2026

Kolhapur, Maharashtra

- Performed exploratory data analysis (EDA), data preprocessing, and feature engineering using **Python (Pandas, NumPy, Scikit-learn)**.
- Developed supervised machine learning models for regression and classification with model validation and hyperparameter tuning.
- Implemented deep learning models including **CNN** and **LSTM** using TensorFlow/Keras for computer vision and sequential data tasks.
- Applied TF-IDF and Word2Vec for text preprocessing, improving classification performance.
- Developed and deployed machine learning models using **Flask/FastAPI** for real-time prediction services.
- Utilized Git/GitHub for version control, collaborative development, and project documentation.

Projects

Disease Prediction and Healthcare Recommendation System 🐙 [GitHub](#) | *Python, Flask*

March 2026

- * Built a machine learning-based disease prediction system using Support Vector Classifier (SVC) for multi-class classification across 130+ symptoms.
- * Achieved 90% model accuracy through effective preprocessing, feature mapping, and model training.
- * Developed a Flask web application enabling real-time predictions with low-latency (sub-second) response time.
- * Integrated multiple structured datasets (symptoms, precautions, medications, diets, workouts) to deliver personalized healthcare recommendations.
- * Built modular functions for prediction and recommendation retrieval, improving code maintainability and scalability.
- * Designed dynamic UI templates to display predictions, descriptions, precautions, medications, and lifestyle guidance.

Time Series Forecasting using LSTM 🐙 [GitHub](#) | *Python, Flask, Streamlit, Deep Learning*

December 2025

- * Built an LSTM-based forecasting system using TensorFlow and Keras on historical financial data collected through yfinance.
- * Developed a multi-asset price prediction system supporting Ethereum, Gold, Silver, and Crude Oil using LSTM-based time-series forecasting models.
- * Integrated real-time and historical market data using the yFinance API for dynamic data ingestion and live analysis.
- * Implemented data preprocessing pipeline including normalization (MinMaxScaler) and 100-day sliding window sequence generation for model training.
- * Applied technical indicators such as 200-day EMA and 365-day Moving Average to enhance feature representation and trend learning.
- * Built an interactive Streamlit-based dashboard with live TradingView visualizations, historical price charts, and prediction outputs.

Technical Skills

Programming: Python, SQL(Joins,Window Functions,CTE,s), HTML/CSS

Data Analysis: EDA, Data Cleaning, Data Wrangling, Statistical Analysis

Machine Learning: Supervised & Unsupervised Learning, Regression, Classification, Feature Engineering, Model Evaluation, Scikit-Learn

Visualization & BI: Power BI, Excel, Matplotlib, Seaborn, Dashboarding

Tools & Platforms: VS Code, PyCharm, Jupyter Notebook, Google Colab, GitHub

Deep Learning: CNN, LSTM, Word2Vec

Deployment & Frameworks: Flask, FastAPI, Streamlit

Excel: Vlookup, Xlookup,Pivot Table

Certification/ Extracurricular

- * Cisco Networking Academy : Data Science Essentials (2026)
- * Hacker Rank: SQL(Basic) (2025)
- * Infosys Springboard: Python Certification (2025)
